Fletcher Group

YOUR SUD SCREENING AND TREATMENT PARTNER

THE NEED IS REAL

Over 20 million Americans—one in ten—currently have at least one addiction, yet only ten percent of them receive treatment. That's in part because few medical clinics, community health centers and private practices offer the screening, diagnosis and medication-assisted treatments their patients may need. Nor are they able to refer patients to high-quality recovery facilities where disorders can be professionally addressed.

YOU'RE IN THE RIGHT PLACE

Screenings for common, treatable conditions—even cancers associated with significant morbidity and mortality—routinely take place in general medical settings. Patients, too, prefer that screenings take place in an integrated care setting where therapeutic relationships are already established.

THE USPSTF AGREES

Given the prevalence of SUDs in patients and the effectiveness of medications to treat them, the U.S. Preventive Services Task Force recommends that primary care providers screen all patients for SUDs.

OUR SERVICES

The Fletcher Group is funded by the Kentucky Opioid Response Effort (KORE) to help healthcare providers identify and treat SUD patients. We're also a HRSA-funded national leader in providing high-quality Recovery Housing for patients referred to us. We complete your continuum of care with essential services sensitively adapted to your practice.

Implementation includes:
- Development of practice-specific protocols addressing all patient needs, from induction to maintenance
- Staff and provider consultation, guidance, training, and onsite Technical Assistance
- MAT education regarding waiver certifications
- EMR templating to meet payor requirements for billings, including CPT codes and all needed documentation
- Data collection for outcome quality measures of care
